
Transfert de mail de postfix vers exchange via imapsync

Introduction

Cette solution fonctionne pour transférer les mails entre deux postfix ou entre deux exchanges.

C'est la seule solution que j'ai trouvé pour résoudre ce problème

Installation

Il faut d'abord installer les paquets nécessaires

```
apt install libauthen-ntlm-perl libcgi-pm-perl libcrypt-openssl-rsa-perl  
libdata-uniqid-perl libencode-imaputf7-perl libfile-copy-recursive-perl  
libfile-tail-perl libio-socket-inet6-perl libio-socket-ssl-perl libio-tee-  
perl libhtml-parser-perl libjson-webtoken-perl libmail-imapclient-perl  
libparse-recdescent-perl libmodule-scandeps-perl libreadonly-perl  
libregexp-common-perl libsys-meminfo-perl libterm-readkey-perl libtest-  
mockobject-perl libtest-pod-perl libunicode-string-perl liburi-perl libwww-  
perl libtest-nowarnings-perl libtest-deep-perl libtest-warn-perl libdist-  
checkconflicts-perl libpar-packer-perl libtest-fatal-perl libtest-modern-  
perl libtest-requires-perl libtest-mock-guard-perl libproc-processtable-  
perl make time cpanminus git  
apt-get install apt-file -y  
apt-file update
```

Ensuite il faut installer imapsync

```
cd /root  
git clone https://github.com/imapsync/imapsync.git  
cd imapsync/  
make  
make install
```

Ensuite vérifier qu'imapsync fonctionne

```
imapsync --testslive
```

Déplacer les mails

La commande pour déplacer les mails est la suivante

```
imapsync --host1 imap.yandex.ru --user1 myemail@domain.tld --password1  
Passw0rd --host2 localhost --user2 myemail@domain.tld --password2 Passw0rd2  
--automap --ssl2
```

Un exemple de commandes

```
root@vps-cf0eb134:~/imapsync# imapsync --host1 localhost --user1 info --password1 [REDACTED] --host2 172.16.0.230 --user2 info --password2 [REDACTED] --automap  
--ssl2
```

On peut mettre FQDN comme adresse IP en l'occurrence ici mes deux machines sont dans le même réseau

Résultat

```
host1 folder    4/5 [Courrier indésirable] = [Courrier indésirable] Size:      0 Messages:      0 Biggest:      0  
host2 folder    4/5 [Courrier indésirable] = [Courrier indésirable] Size:      0 Messages:      0 Biggest:      0  
host2-Host1     0  
  
host1 folder    5/5 [INBOX]           Size:  81679 Messages:  7 Biggest:  26041  
host2 folder    5/5 [INBOX]           Size:  80016 Messages:  5 Biggest:  22336  
host2-Host1     -1663              -2       -3705  
  
host1 Nb folders:      5 folders  
host2 Nb folders:      5 folders  
  
host1 Nb messages:    16 messages  
host2 Nb messages:    5 messages  
  
host1 Total size:    9912502 bytes (9.453 MiB)  
host2 Total size:    88016 bytes (78.141 KiB)  
  
host1 Biggest message: 6302284 bytes (6.010 MiB)  
host2 Biggest message: 22336 bytes (21.812 KiB)
